BalcoNano® from Balcony Systems is a DIY self-application coating process that transforms ordinary glass into self-cleaning glass, making the surface smooth and water-repellent.

Dirt and other deposits wash away easily or are simply cleaned with water and a cloth, without the need to use chemical cleaners - greatly reducing maintenance.

Supplied in easy-to-apply 'wet wipe' sachets, the coating can be applied to kitchen tops, sinks, shower enclosures, ceramic tiles and many other areas. BalcoNano® is to glass like Teflon® is to your frying pan. Find out more at www.balconano.com.

David and Zelda Gunn chose three glass and aluminium Juliet balconies from Balcony Systems to enhance views from their newbuild home in rural Bedfordshire.

Handrails with a Bronze finish complement the Antique Gold external rendering on the four-bedroomed property. "We've got some fantastic views from the house, so glazed balconies keep the views," said David. "Clear glass works very well as it doesn't impede the view and cleaning it from the inside is so easy.
